

Viracor

Serving the testing needs of transplant patients with in-home phlebotomy

As hospital systems become increasingly stressed with Coronavirus (COVID-19), SOT and BMT patients may be unable to return to the hospital or care center for their required testing.

Viracor's Labs@HOME service offers physicians the option to order from a select menu of infectious disease, transplant-related testing and routine blood labs for these at-risk patients. A professional phlebotomist will then schedule a time to safely perform the specimen collection in the patient's home.

**Ordered by
the Physician**

**Scheduled by
the Patient**

Labs@HOME SOT Profile:

- CMV, ADV, BKV, EBV, HHV-6 and Immunosuppressive therapeutic drug monitoring (TDM)*

Labs@HOME BMT Profile:
